to see how Audrey
is doing now.*

Parent Tip:

*Ask questions.
Even if you've already
asked. And even if you
are scared of the answer.*

Advocate: World Braille Day

The 4th of January 2016 is World Braille Day due to it being the birthday of Louis Braille who invented this code in 1821. In our community of preemie parents we have many families affected by blindness due to Retinopathy of Prematurity (ROP). Braille is used worldwide. To learn more about the individual behind it, go here to find out more: <http://bit.ly/BrailleDay>

Preemie Resource: Feeding & Swallowing Disorders

PreemieWorld provides a number of free handouts to be used in the NICU and beyond in its "Freebies For You" section of the website. **This month's freebie is "Feeding & Swallowing Disorders."** "Feeding is one of the issues I hear about consistently," comments Deb Discenza, co-Founder of PreemieWorld, LLC. "In the NICU parents are excited to see their baby be

able to eat by tube, by bottle or by breast. But the reality is that many of these kids have ongoing feeding issues." Parents and professionals alike will appreciate this freebie in that it is easy to print and reproduce. **So go download it here now:** <http://bit.ly/FeedingIssues> And **check out many more here:** <http://bit.ly/PreemieFreebies>

To Do List

CONGRATS: Sheri Ricciardo won the Deanna Fei Book *Girl in Glass* and Sarah Harris won the *little man* DVD

Term: Retinopathy of Prematurity (ROP)

Retinopathy of Prematurity (ROP):

An eye disease that affects the Preemie population. ROP has a number of stages and can ultimately lead to vision damage or even partial/full blindness as a result of *too much* oxygen, or frequently changing blood levels of oxygen and carbon dioxide.

Questions to Ask the Doctor:

1. Is my baby at risk for ROP? If my baby is at risk, when will the specialist do the eye exam? And when will you know that he is no longer at risk for ROP?
2. Is there anything I can do to make my baby more comfortable during this exam?
3. If there is ROP, what is the stage and what interventions will be taken? Prognosis?

Book: Helping your child with Extreme Picky Eating

Picky Eaters can often drive parents to distraction with seemingly random and arbitrary eating habits. In this book, Katja Rowell and Jenny McGlothlin outline tips, tools, and coping mechanisms to help parents draw out the food lover that can present itself in any child. While some of the techniques described in the book are novel, there is nothing earth shattering or overly difficult for a frustrated parent to implement. Feeding your child can be overwhelming in many preemie households, and this book offers strategies that can prevent the dinner table from becoming a war zone.

After the NICU: Preemie Parent Resolutions

With 2016 upon us, let's think out some preemie parent resolutions:

- It is also about *you*: Find a way for someone to help out with the kids so you can get out for a much-needed coffee break or lunch with friends. Doing so helps you but also your family's well being.
- It is also about *us*: Resolve to have date time with your partner for at least a couple of hours. It could be dinner, coffee, dessert.
- Thank your favorite professional and tell him/her *why* in detail. They likely need it today. Their job is hard, too.

Tweet Us: What's your #preemienewyear resolution?

Preemie Parent Words: 12 Years to Get Through Feeding Challenges

Deb Discenza *provides personal wisdom regarding feeding therapy to parents and professionals.*

As I write this column, my daughter is a little over 12 years old and *finally* eating a proper diet. It didn't happen without a lot of work on part of my daughter, my husband and myself not to mention the feeding therapists. The last 12 years were spent struggling with textures, sensory issues, developmental delays, developmental diagnoses and more. We had Early Intervention involved, then ChildFind Preschool, then Special Education. Our pediatrician didn't have the knowledge to know more than to weigh her and chart her growth curve, so I was on my own. I, like so many

preemie parents have struggled to get things righted yet had no back-up, no support. In my mind it shouldn't have taken 12 years to get to this point.

To Parents: Never, ever think that feeding issues are no big deal. If the pediatrician or other specialists cannot give you a proper idea of what to do, contact www.FeedingMatters.org - now.

To Professionals: If you don't know enough about feeding issues, say so, but suggest to the parent that they reach out to a specialist for guidance. Feeding Matters (link above), is a resource that I highly recommend for both parents and professionals.
